Name :- N.Supriya
Reg no :- 192511262
Course code :- CSA1616
Course Name:- Data Warehousing and Data Mining for Image Processing

Experiment-1

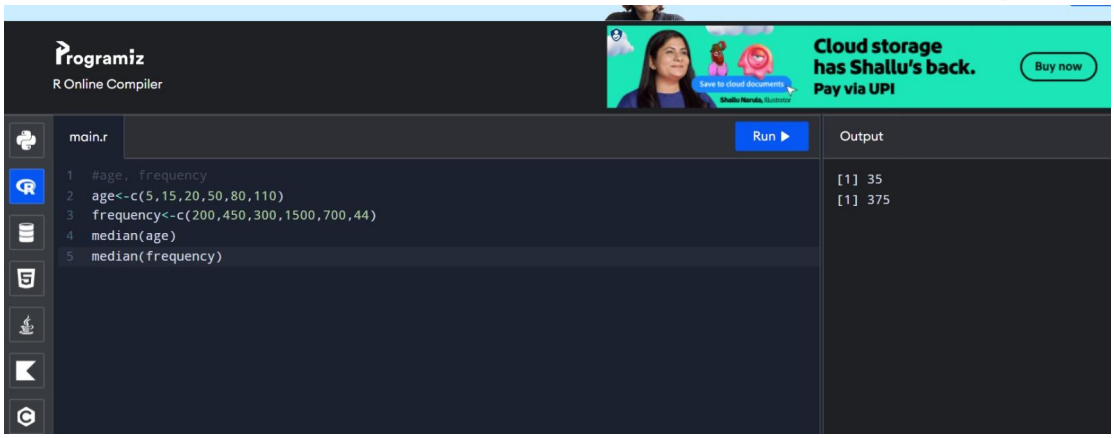

AIM:- To find intervals and corresponding frequencies.

Code:-

```
#age, frequency
age<-c(5,15,20,50,80,110)
frequency<-c(200,450,300,1500,700,44)
median(age)
median(frequency)
```

192511262_N.Supriya

OUTPUT:-

Result:- It is executed successfully.

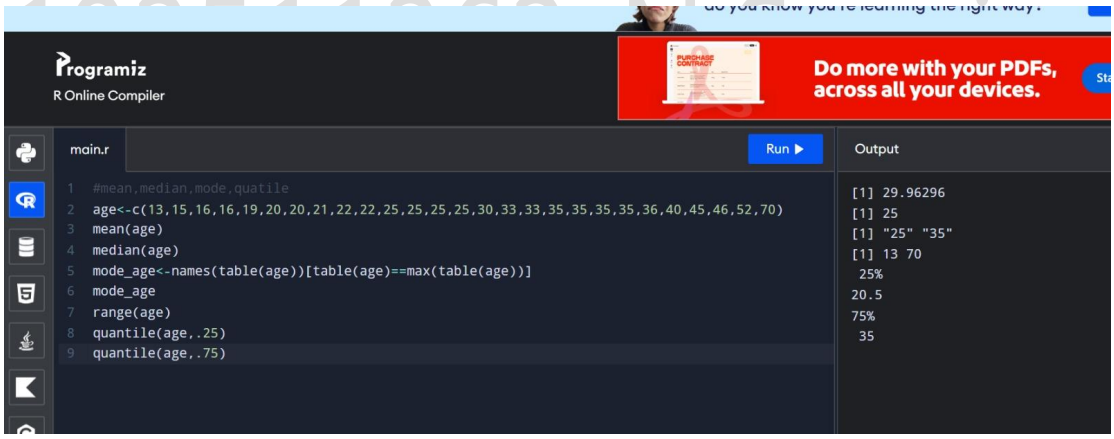

Experiment-2

Aim:- To find the data for analysis includes the attribute age.

Code:-

```
#mean,median,mode,quatile
age<-
c(13,15,16,16,19,20,20,21,22,22,25,25,25,25,30,33,33,35,35,35,35,36,40,
45,46,52,70)
mean(age)
median(age)
mode_age<-names(table(age))[table(age)==max(table(age))]
mode_age
range(age)
quantile(age,.25)
quantile(age,.75)
```

Output:-

Result:- It is executed successfully.

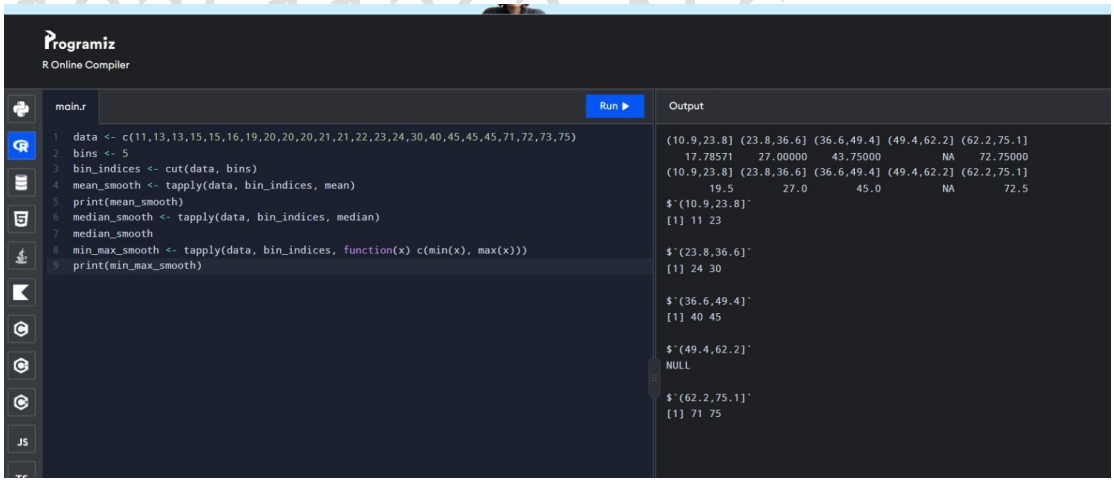

Experiment-3

Aim:- To show Data Preprocessing IN Reduction and Transformation .

Code:-

```
data <-
c(11,13,13,15,15,16,19,20,20,20,21,21,22,23,24,30,40,45,45,45,71,72,73,
75)
bins <- 5
bin_indices <- cut(data, bins)
mean_smooth <- tapply(data, bin_indices, mean)
print(mean_smooth)
median_smooth <- tapply(data, bin_indices, median)
median_smooth
min_max_smooth <- tapply(data, bin_indices, function(x) c(min(x),
max(x)))
print(min_max_smooth)
```

output:-

Result:- It is executed successfully.
